## 1. Introduction

Australian Geotechnical Testing (AGT) has been engaged by Wayne Horne Earthmoving to provide Level 1 Geotechnical Supervision for allotment filling of Alluvium Estate Stage 1 project.

This Level 1 report presents the results of supervision activities, compaction and moisture control, material placement and laboratory testing for ground works undertaken for the project. This report covers construction activities carried out **4<sup>th</sup> February 2020 till 4<sup>th</sup> March 2021**.

## 2. Scope of Works

The scope of works involved the placement of imported General Fill. Fill Material was placed in Level one fill areas, in accordance with **AS 3798-2007, Guidelines on earthworks for commercial and residential developments and project specifications**. The level of FILL to be placed is less than 5m as per AS3798 Section 1.1.

The fill material is required as per AS3798 and the project specification to achieve:

- **95% Standard Maximum Dry Density (Compaction)**

General fill material used for the construction was locally sourced and predominantly comprising of **CLAY**.

## 3. Inspections / Supervision

Level 1 supervision and inspection was undertaken including the supervision and inspections regarding the stripping and removal as per AS3798 Section 3 shall have removed:

- Organic soils, such as topsoils, severely root affected subsoils and peat.
- Contaminated soils are part of the brief.
- Materials which undergo volume change or loss of strength when disturbed and exposed to moisture.
- Silts, or materials that have deleterious engineering properties of silt.
- Other materials with properties that are unsuitable for the forming of structural fill.
- Fill that contains wood, metal plastic, boulders or other deleterious material, in sufficient proportions to affect the required performance of the fill.
- The maximum particle size of any rocks or other lumps, within the layer, has not exceeded two-thirds ( $\frac{2}{3}$ ) of the compacted layer thickness.

The lots inspected were essentially homogeneous in relation to material type and moisture condition, rolling response and compaction technique and which has been used for the assessment of relative compaction of an area of work (AS3798 Section 1.2.8).

Prior to placement any existing filled ground, for which the conditions of the placement are not adequately documented have not been assumed to have been of either standard compaction or of the composition adequate to support fill or any loads has been removed (AS3798 Section 2).

## 4. Testing

The project was classified as **Commercial**, thereby requiring a minimum compaction result of **95%** density ratio Standard Compaction for the **cohesive soils** (AS 1289 5.7.1 & 5.1.1) throughout the Level 1 Fill and in

---

accordance with AS 3798-2007 – Table 5.1. The test was performed using a Nuclear Density Gauge for field density determination AS 1289.5.8.1.

As a minimum testing was undertaken either 1 test per lot, 1 test per 1,000m<sup>2</sup> per layer, or 1 test per 200m<sup>3</sup> distributed reasonably evenly throughout full depth and area as per AS3798 Table 8.1.

The material was placed in approximately 200mm loose layers, rolling effort with on-site Compactor (to seal of each layer of placed General Fill material) to a compacted 150mm layer that achieved 95% Standard Compaction which met Australian Standards specifications. This was considered the best method to achieve compaction using the plant and machinery available.

The NATA compaction reports verify the achievement of the minimum density requirement of 98% Standard Compaction throughout the full depth area, with each layer tested accordingly. All test results were provided to our client for inclusion within their internal quality system.

At the completion of the structural layers and material within 150mm of permanent subgrade level in cuttings, test rolling was undertaken, and the layers withstood test rolling without visible deformation or springing (AS 3798 Section 5.5).

The area covered by this Level 1 Supervision report (site plan) are shown in the Appendix A, the Controlled-fill Certificates are shown in Appendix B, the results of the Laboratory Testing are shown in Appendix C, and the site photos are also indicated in Appendix D.

## 5. Conclusion

On the completion of the earthworks and after analysing the materials used, it has been concluded that the filling procedure **conducted by Client satisfies** the general requirements of AS 3798 regards to the placement of fill materials on a project under Level 1 Supervision and in accordance with the project specification as provided to AGT.

The fill meets the requirements for “structural fill for residential applications” in accordance with AS3798. The fill has been placed, compacted, and tested in accordance with AS3798 and the fill meets the requirements for controlled fill in accordance with AS2870 (2011) “Residential Slabs and Footings”.

This report has been prepared for the benefit of our client with respect to the particular brief given to us and it may not be relied upon in other contexts or for any other purpose without our prior review and agreement. No responsibility for this report will be taken by AGT if it is altered in any way, or not reproduced in full.

## 6. Applicability

The findings and conclusions contained in this Report are made based on site conditions that existed at the time this work was conducted. The conclusions presented in this report are relevant to the conditions of the site and the state of legislation currently enacted as at the date of this report.

Findings and conclusions are made assuming that the soil, groundwater, geological and chemical conditions detailed within this report are accurate and remain applicable to the site at the time of writing. No other warranties are made or intended.

AGT has used a degree of skill and care ordinarily exercised by reputable members of our profession practicing in the same or similar locality.

AGT does not make any representation or warranty that the conclusions in this report will be applicable in the future as there may be changes in the condition of the site, applicable legislation or other factors that would affect the conclusions contained in this report.

This report has been prepared exclusively for use by our Client. This report cannot be reproduced without the written authorisation of AGT and then can only be reproduced in its entirety.

## NOTES

1. DESIGN LINE IS CENTRAL OR PARALLEL TO ROAD RESERVE TITLE BOUNDARY IN ALL PLACES, UNLESS NOTED OTHERWISE. IT'S LOCATION IS INDICATED ON TYPICAL CROSS-SECTIONS UNLESS NOTED OTHERWISE.
  2. THIS PLAN SHOWS ONLY APPROXIMATE EXTENTS & LEVELS OF FILL TO BE PLACED DURING CONSTRUCTION. DEPTH OF FILL USED FOR TOP DRESSING ALL ALLOTMENTS MAY VARY BY UP TO 0.15m. THE EXTENT OF FILL SHOWN IS BASED ON DESIGN AND MAY BE SUBJECT TO CHANGE FOLLOWING FINAL INSPECTION BY GEOTECHNICAL ENGINEER.
  3. REFER TO LINEMARKING OR INTERSECTION DETAIL SHEETS FOR TACTILE MARKING DETAILS.
  4. I.D.M. = "INFRASTRUCTURE DESIGN MANUAL"; EDCM = "ENGINEERING DESIGN AND CONSTRUCTION MANUAL" BY 'GROWTH AREAS AUTHORITY'.
  5. ALL STANDARD DRAWINGS NOTED REFER TO STANDARD DRAWINGS IN THE I.D.M. UNLESS NOTED OTHERWISE
  6. VIC ROADS WORKS HOLD POINTS:
    - WORKS NOT TO BEGIN UNTIL ALL RELEVANT CONTROLS IN THE ENVIRONMENTAL MANAGEMENT PLAN ARE IMPLEMENTED.
    - TREATMENT OF UNSUITABLE SUBGRADE MATERIALS TO BE DISCUSSED WITH VICROADS AND DOCUMENTED.
    - CONTRACTOR SHALL PROVIDE FOR VICROADS TO BE PRESENT AT ALL TEST ROLLING.
    - THE CONTRACTOR SHALL USE ONLY REGISTERED ASPHALT MIXES UNLESS APPROVED BY VICROADS.
    - FORMWORK AND REINFORCEMENT PLACEMENT TO BE INSPECTED BY VICROADS FOR ALL REINFORCED CONCRETE ELEMENTS PRIOR TO CONCRETE PLACEMENT.
    - COMPACTION RESULTS FOR PAVEMENT LAYERS TO BE REVIEWED AND ACCEPTED BY VICROADS PRIOR TO PLACEMENT OF SUBSEQUENT PAVEMENT COURSES.
    - REDUNDANT PAVEMENT MARKINGS ARE TO BE GROUND OUT OR PRESSURE WASHED OFF, NOT PAINTED OVER.

## TYPICAL NOTATIONS - EXAMPLE

The diagram consists of a circle with a horizontal diameter. The word "SECTION" is written above the top half of the circle, and "D" is at the top of the vertical axis. Below the horizontal axis, the letters "N.T.S." are centered, with a short vertical line segment extending downwards from the center of the axis.

Chainage (m)	Lot 129 - Retest #110	Lot 130	Lot 131
Location Offset (m)	Centre of block	S/E cnr	Centre of block
Layer / Reduced Level	150mm below FSL	150mm below FSL	150mm below FSL
Thickness of Layer (mm)	150	150	150
Soil Description	Brown Silty Clay	Brown Silty Clay	Brown Silty Clay
Test Depth (mm)	125	125	125
Sieve used to determine oversize (mm)	19.0	19.0	19.0
Percentage of Wet Oversize (%)	**	**	**
Field Wet Density (FWD) t/m <sup>3</sup>	1.98	1.98	1.97
Field Moisture Content %	26.3	25.2	28.8
Field Dry Density (FDD) t/m <sup>3</sup>	1.56	1.58	1.53
Peak Converted Wet Density t/m <sup>3</sup>	2.01	2.03	2.03
Adjusted Peak Converted Wet Density t/m <sup>3</sup>	**	**	**
Moisture Variation (Wv) %	-0.5	-0.5	-0.5
Adjusted Moisture Variation %	**	**	**
Hilf Density Ratio (%)	98.0	97.0	97.5
Compaction Method	Standard	Standard	Standard

## Moisture Variation Note:

Positive values = test is dry of OMC

Negative values = test is wet of OMC

# Material Test Report

**Report Number:** AGT60012-39  
**Issue Number:** 1  
**Date Issued:** 12/11/2020  
**Client:** Wayne Horne Earthmoving  
 3 Trewin Street, Wendouree VIC 3355  
**Contact:** Dave Compston  
**Project Number:** AGT60012  
**Project Name:** Alluvium Estate  
**Project Location:** Alfredton  
**Work Request:** 420  
**Date Sampled:** 10/11/2020  
**Dates Tested:** 10/11/2020 - 12/11/2020  
**Sampling Method:** AS 1289.1.2.1 6.4 (b) - Sampling from layers in earthworks or pavement - compacted  
**Specification:** 98% Modified  
**Material:** Brown Mottled Silty Clay  
**Material Source:** Import
